Featuring the Ember Burner

- Direct Vent Freestanding Stove
- Natural Gas or Propane
- Vent Horizontally or Vertically
- Standard Residential
- Mobile Home Approved

Tested and Listed by
OMNI-Test Laboratories, Inc.
Beaverton, Oregon
Report # 028-S-58-5
ANSI Z21.88

WARNING: If the information in these instructions is not followed exactly, a fire or explosion may result causing property damage, personal injury or loss of life.

- Do not store or use gasoline or other flammable vapors and liquids in the vicinity of this or any other appliance.

WHAT TO DO IF YOU SMELL GAS
- Do not try to light any appliance.
- Do not touch any electrical switch; do not use any phone in your building.
- Immediately call gas supplier from a neighbor's phone. Follow the gas supplier's instructions.
- If you cannot reach your gas supplier, call the fire department.

- Installation and service must be performed by a qualified installer, service agency or the gas supplier.

- This appliance may be installed in an aftermarket permanently located, manufactured home (USA only) or mobile home, where not prohibited by local codes.

This appliance is only for use with the type of gas indicated on the rating plate. This appliance is not convertible for use with other gases unless a certified kit is used.

Tree of Life Owner's Manual

Installer: After installation give this manual to the home-owner and explain operation of this heater.

Mukilteo, WA 98275
Introduction

We welcome you as a new owner of an Avalon Tree of Life stove. In purchasing a Tree of Life you have joined the growing ranks of concerned individuals whose selection of an energy system reflects both a concern for the environment and aesthetics. The Tree of Life is one of the finest home heaters the world over. This manual will explain the installation, operation, and maintenance of this stove. Please familiarize yourself with the Owner’s Manual before operating your heater and save the manual for future reference. Included are helpful hints and suggestions that will make the operation and maintenance of your new stove an easier and more enjoyable experience. We offer our continual support and guidance to help you achieve the maximum benefit and enjoyment from your heater.

Important Information

No other Tree of Life Stove has the same serial number as yours. The serial number is on the listing plate chained to the gas control valve.

This serial number will be needed in case you require service of any type.

Model: Avalon Tree of Life Stove
Serial Number: ______________________
Purchase Date: ______________________
Purchased From: ______________________

Register your warranty online at: traviswarranty.com

Or, mail your warranty card to:
Travis Industries House of Fire
4800 Harbour Pointe Blvd. SW
Mukilteo, WA 98275

Save Your Bill of Sale.

To receive full warranty coverage, you will need to show evidence of the date you purchased your heater. Do not mail your Bill of Sale to us.

We suggest that you attach your Bill of Sale to this page so that you will have all the information you need in one place should the need for service or information occur.

We suggest that our gas hearth products be installed and serviced by professionals who are certified in the U.S. by the National Fireplace Institute® (NFI) as NFI Gas Specialists.

4 Safety Precautions

- **IF YOU SMELL GAS:**
  * Do not light any appliance
  * Extinguish any open flame
  * Do not touch any electrical switch or plug or unplug anything
  * Open windows and vacate building
  * Call gas supplier from neighbor's house, if not reached, call fire department

- This unit must be installed by a qualified installer to prevent the possibility of an explosion. Your dealer will know the requirements in your area and can inform you of those people considered qualified. The room heater should be inspected before use and at least annually by a qualified service person. More frequent cleaning may be required due to excessive lint from carpeting, bedding material, etc.

- The instructions in this manual must be strictly adhered to. Do not use makeshift methods or compromise in the installation. Improper installation will void the warranty and safety listing.

  Look for this label:

  ![Label](image)

  If the label is present, the heater is equipped for LP (propane). If the label is absent, the heater is equipped for NG (natural gas).

  - This heater is either approved for natural gas (NG) or for propane (LP or LPG). Burning the incorrect fuel will void the warranty and safety listing and may cause an extreme safety hazard. Direct questions about the type of fuel used to your dealer. Check for the label shown to the right.

- Contact your local building officials to obtain a permit and information on any installation restrictions or inspection requirements in your area. Notify your insurance company of this heater as well.

- If the flame becomes sooty, dark orange in color, or extremely tall, do not operate the heater. Call your dealer and arrange for proper servicing.

- It is imperative that control compartments, screens, or circulating air passageways of the heater be kept clean and free of obstructions. These areas provide the air necessary for safe operation.

- Do not store or use gasoline or other flammable liquids in the vicinity of this heater.

- Do not operate the heater if it is not operating properly in any fashion or if you are uncertain. Call your dealer for a full explanation of your heater and what to expect.

- Do not use this appliance if any part has been under water. Immediately call a qualified service technician to inspect the appliance and to replace any part of the control system and any gas control which has been under water.
Safety Precautions

- Do not place clothing or other flammable items on or near the heater. Because this heater can be controlled by a thermostat there is a possibility of the heater turning on and igniting any items placed on or near it.

- The viewing glass should be opened only for lighting the pilot or conducting service. Do not operate with cracked, broken, or removed glass.

- Any safety screen or guard removed for servicing must be replaced prior to operating the heater.

- Operate the heater according to the instructions included in this manual.

- If the main burners do not start correctly turn the gas off at the gas control valve and call your dealer for service.

- This unit is not for use with solid fuel.

- Do not place anything inside the firebox (except the included fiber logs).

- If the fiber logs become damaged, replace with Travis Industries log set.

- Children and adults should be alerted to the hazards of high surface temperature and should stay away to avoid burns or clothing ignition. Young children should be supervised when they are in the same room as the heater.

- Instruct everyone in the house how to shut gas off to the appliance and at the gas main shutoff valve. The gas main shutoff valve is usually next to the gas meter or propane tank and requires a wrench to shut off.

- Light the heater using the built-in piezo igniter. Do not use matches or any other external device to light your heater.

- Never remove, replace, modify or substitute any part of the heater unless instructions are given in this manual. All other work must be done by a trained technician. Don't modify or replace orifices.

- Allow the heater to cool before carrying out any maintenance or cleaning.

- The pilot flame must contact the thermopile and thermocouple (see the illustration to the left). If it does not, turn the gas control valve to “OFF” and call your dealer.

- Do not throw this manual away. This manual has important operating and maintenance instructions that you will need at a later time. Always follow the instructions in this manual.

- Plug the heater into a 120V grounded electrical outlet. Do not remove the grounding plug.

- Don’t route the electrical cord in front of, over, or under the heater

- Travis Industries, Inc. grants no warranty, implied or stated, for the installation or maintenance of your heater, and assumes no responsibility of any consequential damage(s).
Features:
- Ember Fyre™ Burner for "Wood Fire" Look
- Works During Power Outages (millivolt system)
- High Efficiency
- Optional Thermostat or Remote Control
- Optional Blower for Quicker Heat Distribution
- Convenient Operating Controls
- Variable-Rate Heat Output
- Low Maintenance

Installation Options:
- Freestanding Stove
- Horizontal or Vertical Vent
- Residential or Mobile Home
- Straight or Corner Placement
- Bedroom Approved

Heating Specifications:
Approximate Heating Capacity (in square feet)*: 500 - 1,500 with Blower, 500 to 1,200 Without
Maximum BTU Input Per Hour: 31,000
Output from Low to High (in BTU's per hour): 16,608 to 26,815
Steady State Efficiency (without blower)**: Up to 86.5 %
AFUE (without blower): Up to 72.8 %

* Heating capacity will vary depending on the home's floor plan, degree of insulation, and the outside temperature.
** Efficiency rating is a product of thermal efficiency rating determined under continuous operation independent of installed system.

Dimensions & Weight:
- Dimensions: 18-3/8" x 15-1/4" x 26-3/4"
- Weight: 215 Lbs.
- The flue collar protrudes 7/8" above the stove top
- Measure side, corner, and back clearances from the stove top.

Electrical Specifications (for optional blower):
Electrical Rating: 115 Volts, 1.3 Amps, 60 Hz (150 watts on high)

Fuel:
This heater is shipped in natural gas (NG) configuration but may be converted to propane (LP) using the included LP conversion kit. The sticker on top of the gas control valve will verify the correct fuel.
**Installation Warnings:**

! Failure to follow all of the requirements may result in property damage, bodily injury, or even death.

! This heater must be installed by a qualified installer who has gone through a training program for the installation of direct vent gas appliances.

! This appliance must be installed in accordance with all local codes, if any; if not, follow ANSI Z223.1 and NFPA 54(88).

! In Manufactured or Mobile Homes must conform with Manufactured Home Construction and Safety Standard, Title 24 CFR, Part 3280, or, when such a standard is not applicable, the Standard for Manufactured Home Installations, ANSI/NCSBCS A225.1. This appliance may be installed in Manufactured Housing only after the home is site located.

! This stove is designed to operate on natural gas or propane (LP).

! All exhaust gases must be vented outside the structure of the living-area. Combustion air is drawn from outside the living-area structure.

! Notify your insurance company before hooking up this stove.

! The requirements listed below are divided into sections. All requirements must be met simultaneously. The order of installation is not rigid – the qualified installer should follow the procedure best suited for the installation.

### Packing List

- Propane Conversion Kit
- Log Set
- Glass Latch Tool (to un-latch glass frame)
- Touch-Up Paint

### Additional Items Required

- Vent (see “Venting Requirements” for details)
- Gas Line Equipment (shutoff valve, pipe, etc.)

---

**Installation Overview**

See "Vent Requirements"

See "Gas Line Installation"

See "Floor Protection Requirements"

See "Clearances"
Installation Hints:

- If converting to LP, convert the appliance prior to installation.
- The blower is easiest to install prior to installation. Because the blower is located near the gas inlet location, the gas inlet must be routing around the blower position.
- Install the logs last - they are fragile.
- When determining the location of the stove, locate the wall studs (for horizontal penetrations) and ceiling trusses (for vertical penetrations). You may wish to adjust the stove position slightly to ensure the vent does not intersect with a framing member.
- Fumes and smoke from the paint curing and oil burning off the steel may occur the first time you start this heater. This is normal. We recommend you open windows to vent the room.

Stove Clearances

Straight Installations

With this clearance the vent is centered 7-1/8" from the back wall, 23-1/2" from the side wall.

Corner Installations

With this clearance, the vent is centered 15-3/4" from the wall.

Mobile Home Requirements

- When the stove is installed in a mobile home, it must be bolted to the floor and the appliance grounded (use the optional blower with a grounded circuit or other suitable grounding method - current ANSI/NFPA 70).
Heater Placement Requirements

- Heater must be installed on a level surface capable of supporting the heater and vent.
- Due to high temperatures, the appliance should be located out of traffic and away from furniture and draperies.
- When placed in a location where the floor to ceiling height is under 7 feet, the installation is considered an alcove and must meet the following requirements:
  - The alcove floor to ceiling height must be at least 58” tall
  - The alcove must not be more than 45” deep before the ceiling returns to 7’
  - The alcove must be at least 46-3/4” wide
- The heater must not be placed so the vents below or above the door, along the sides of heater, or along the back of the heater can become blocked.
- This heater may be placed in a bedroom. Please be aware of the large amount of heat this appliance produces when determining a location.

Floor Protection Requirements

- When the stove is installed directly on carpeting, vinyl or other combustible material other than wood flooring or a high pressure laminate wood floor, the stove must be installed on a metal or wood protection panel extending the full width and depth of the heater (Minimum 26-3/4” wide by 19” deep).

  Make sure these rubber tipped bolts on each leg contact the floor (they dampen any noise that may transmit through the hearth). Do not adjust with weight on the legs, the rubber tips may tear.
Gas Line Installation

MASSACHUSETTS INSTALLATIONS - WARNING:
THIS PRODUCT MUST BE INSTALLED BY A LICENSED PLUMBER OR GAS FITTER WHEN INSTALLED WITHIN THE COMMONWEALTH OF MASSACHUSETTS.
OTHER MASSACHUSETTS CODE REQUIREMENTS:
• Flexible connector must not be longer than 36 inches.
• Shutoff valve must be a “T” handle gas cock.
• Only direct vent sealed combustion products are approved for bedrooms or bathrooms.
• Fireplace dampers must be removed or welded in the open position prior to the installation of a fireplace insert or gas log.
• A carbon monoxide (CO) detector is required in the same room as the appliance.

! The gas line must be installed in accordance with all local codes, if any; if not, follow current ANSI Z223.1 or NFPA 54.

! The heater and gas control valve must be disconnected from the gas supply piping during any pressure testing of that system at test pressures in excess of 1/2 psig (3.45 kPa). For pressures under 1/2 psig (3.45 kPa), isolate the gas supply piping by closing the manual shutoff valve.

NOTE: The gas inlet may pass close to the blower - we suggest you install the blower first or provide adequate clearance.
• This heater is designed for natural gas but can be converted to propane. Check the sticker on top of the gas control valve to verify the correct fuel is used (see page 4).
• Leak test all gas line joints and the gas control valve prior to and after starting the heater.
• A manual shutoff valve is required for installation (it must be located within 3’ of the heater).
• T-Handle gas cocks are required in Massachusetts in compliance with code 248CMR.
• The location of the gas inlet (3/8” FPT) is shown to the right.

Gas Inlet Pressure
• With the heater off, the inlet pressure must meet the requirements listed in the table below
• If the pressure is not sufficient, make sure the piping used is large enough and the total gas load for the residence does not exceed the amount supplied.
• The supply regulator (the regulator that attaches directly to the residence inlet or to the propane tank) should supply gas at the suggested input pressure listed below. Contact the local gas supplier if the regulator is at an improper pressure.

<table>
<thead>
<tr>
<th>Gas</th>
<th>Standard Input Pressure</th>
</tr>
</thead>
<tbody>
<tr>
<td>Natural Gas</td>
<td>7” W.C. (1.74 Kpa)</td>
</tr>
<tr>
<td>Propane</td>
<td>13” W.C. (3.23 Kpa)</td>
</tr>
</tbody>
</table>
**Vent Requirements**

- The vent must maintain the required 1" clearance to combustible materials to prevent a fire. Do not fill air spaces with insulation.

- The gas appliance and vent system must be vented directly to the outside of the building, and never be attached to a chimney serving a separate solid fuel or gas-burning appliance. Each direct vent gas appliance must use its own separate vent system.

- When the vent passes through a wall a wall thimble is required. When the vent passes through a ceiling a support box or firestop is required. When the vent passes through the roof, a roof flashing and storm collar are required. Follow the instructions provided with the vent for installing these items.

  **NOTE:** Wall thimbles may have different dimensions than what is required by this heater.

- Failure to adjust the air shutter properly may lead to improper combustion which can create a safety hazard. Consult your dealer or installer if you suspect an improperly adjusted air shutter.

- This heater has been tested at altitudes ranging from sea level to 8,000 feet (2,400 M). In this testing we have found that the heater, with its standard orifice, burns correctly with just an air shutter adjustment.

- Use of the following 6-5/8" diameter co-axial gas direct vent systems:

<table>
<thead>
<tr>
<th>Manufacturer</th>
<th>Series</th>
</tr>
</thead>
<tbody>
<tr>
<td>Simpson Dura-Vent</td>
<td>Model GS</td>
</tr>
<tr>
<td>Selkirk Hearth Products</td>
<td>Direct-Temp</td>
</tr>
<tr>
<td>American Metal Products</td>
<td>Ameri-Vent</td>
</tr>
</tbody>
</table>

  **NOTE:** Always use the high-wind cap for the type of vent you are using (if applicable)

- Slide the vent sections together and turn 1/4 turn until the sections lock in place.

- Screws are not required to secure the vent. However, three screws may be used to secure vent sections together if desired.

- High temperature sealant is recommended at the appliance starter section connection (use high-temperature silicone or Mill-Pac®).

- If disassembly is required, at time of re-assembly check to see if the vent creates a tight fit. If it does not, apply high temperature sealant to the joints of the affected sections.

- Horizontal sections require a 1/4" rise every 12" of travel

- Horizontal sections require non-combustible support every three feet (e.g.: plumbing tape)
Approved Vent Configurations

Restrictor Position

- A restrictor is built into the appliance to control the flow rate of exhaust gases. This ensures proper flames for the wide variety of vent configurations. Depending upon the vent configuration, you may be required to adjust the restrictor position. The charts for approved vent configurations describe which position the vent restrictor must be in.

To Access the Restrictor
Use both hands to lift the stove top off the stove.

To Adjust the Restrictor

- Lift the cotter pin out.
- Slide the restrictor adjustment rod in.
- Replace the cotter pin through the correct hole on the restrictor adjustment rod.

Restrictor Positions

- #1
- #2
- #3
- #4
- #5
- #6

Measuring Vent Lengths

Vent Horizontal Run is measured from the start of the horizontal section to the end of the termination.

Vent Height is calculated to the top of the vent on horizontal terminations and to the top of the termination on vertical terminations.

NOTE: When a horizontal elbow (90° or 45°) is used, horizontal length is the sum of the two lengths (H1 + H2).
**Vertical Termination with Zero, Two, or Four 45° Elbows**

- The termination must fall within the shaded area shown in the chart. Use the indicated restrictor position.

- If using offsets, use the table below to calculate the vertical rise and horizontal offset.

- Restrictor positions are based upon lab tests. The ideal restrictor position may vary slightly, especially when the termination is near a demarkation line.

---

**Table: Offset Length vs. Restrictor Positions**

<table>
<thead>
<tr>
<th>Offset Length</th>
<th>Hor. Offset</th>
<th>Vert. Rise</th>
</tr>
</thead>
<tbody>

</tr>
</tbody>
</table>

**NOTE:**

Restrictor positions are based upon lab tests. The ideal restrictor position may vary slightly, especially when the termination is near a demarkation line.
Horizontal Termination with One 90° Elbow

- If using a Snorkel Termination (14" or 36") add the snorkel height to the vertical height (snorkel terminations are used primarily for basement installations).
- The termination must fall within the shaded area shown in the chart. Use the indicated restrictor position.

**NOTE:**
Restrictor positions are based upon lab tests. The ideal restrictor position may vary slightly, especially when the termination is near a demarkation line.

**Restrictor Position # 5**

**Restrictor Position # 1**

**NOTE:**
Horizontal sections require a 1/4" rise every 12" of travel.

**NATURAL GAS:** Min. 2' Section Required

**PROPANE (LP):** Min. 3' Section Required
**Horizontal Termination with Two Elbows**

(one 90° vertical and one 90° or 45° horizontal elbow)

- If using a Snorkel Termination (14” or 36”) add the snorkel height to the vertical height (snorkel terminations are used primarily for basement installations).
- The termination must fall within the shaded area shown in the chart. Use the indicated restrictor position.

**Restrictor Position # 5**

**Restrictor Position # 1**

**NOTE:**

Horizontal sections require a 1/4” rise every 12” of travel.

**NATURAL GAS:** Min. 2’ Section Required

**PROPANE (LP):** Min. 3’ Section Required

This is considered a horizontal elbow (it does not matter whether it turns right or left). It may be a 90° or 45° elbow.

Horizontal length (max. 24’) is calculated by adding both lengths of horizontal run (Horizontal Length = H1 + H2).

This is considered a vertical elbows
Horizontal Termination with Three 90° Elbows (all vertical)

- The termination must fall within the shaded area shown in the chart. Use the indicated restrictor position.

**NOTE:**
Restrictor positions are based upon lab tests. The ideal restrictor position may vary slightly, especially when the termination is near a demarkation line.

Horizontal sections require a 1/4" rise every 12" of travel.

This is a horizontal elbow - NOT ALLOWED FOR THIS VENT CONFIGURATION

These are vertical elbows.
Vertical Termination with Two 90° Elbows

- The termination must fall within the shaded area shown in the chart. Use the indicated restrictor position.

NOTE:
Restrictor positions are based upon lab tests. The ideal restrictor position may vary slightly, especially when the termination is near a demarkation line.

NOTE:
Horizontal sections require a 1/4" rise every 1/2" of travel.

This is a horizontal elbow - NOT ALLOWED FOR THIS VENT CONFIGURATION.
**Vertical Termination with Three 90° Elbows**
*(Two 90° Vertical and One 45° or 90° Horizontal Elbow)*

- The termination must fall within the shaded area shown in the chart. Use the indicated restrictor position.

---

**Restrictor Position # 1**

**Restrictor Position # 5**

**NOTE:**
Horizontal sections require a 1/4" rise every 12" of travel.

**Restrictor positions are based upon lab tests.** The ideal restrictor position may vary slightly, especially when the termination is near a demarkation line.

Horizontal length (max. 24') is calculated by adding both lengths of horizontal run (Horizontal Length = H1 + H2).

This is considered a horizontal elbow (it does not matter whether it turns right or left). It may be a 45° or 90° elbow.

Travis Industries 100-01169_001 4050119

*Vent Termination Requirements (see illustration below)*

- **A** Minimum 9” clearance from any door or window
- **B** Minimum 12” above any grade, veranda, porch, deck or balcony
- **C** Minimum 3-3/8” from outside corner walls
  
  **NOTE:** Clearance in accordance with local installation codes and the requirements of the gas supplier.
- **D** Minimum 12” from inside corner walls
  
  **NOTE:** Clearance in accordance with local installation codes and the requirements of the gas supplier.
- **E** Minimum 11” clearance below unventilated soffits or roof surfaces
  - Minimum 18” clearance below ventilated soffits
  - Minimum 6” clearance below roof eaves
  
  **NOTE:** Vinyl surfaces require 24”
  
  **NOTE:** Clearance in accordance with local installation codes and the requirements of the gas supplier.
- **F** Minimum 12” clearance below a veranda, porch, deck or balcony
  
  **NOTE:** Permitted only if veranda, porch, deck, or balcony is fully open on a minimum of two sides beneath the floor.
  
  **NOTE:** Clearance in accordance with local installation codes and the requirements of the gas supplier.
- **G** Minimum 48” clearance from any adjacent building
- **H** Minimum 84” clearance above any grade when adjacent to public walkways or driveways
  
  **NOTE:** may not be used over a walkway or driveway shared by an adjacent building
- **I** Minimum 48” clearance from any mechanical air supply inlet
- **J** Minimum 36” clearance above and 48” below and to the sides of non-mechanical air supply inlet
- **K** Minimum 36” from the area above the meter/regulator (vent outlet)
  
  **NOTE:** Clearance in accordance with local installation codes and the requirements of the gas supplier.
- **L** Minimum 36” from the meter/regulator (vent outlet)
  
  **NOTE:** Clearance in accordance with local installation codes and the requirements of the gas supplier.
- **M** Minimum 12” above the roof line (for vertical terminations)
- **N** Minimum 24” horizontal clearance to any surface (such as an exterior wall) – for vertical terminations

---

**NOTE:** Measure clearances to the nearest edge of the exhaust hood.

- Use the vinyl siding standoff (#1250) when installing on an exterior with vinyl siding.
- Vent termination must not be located where it will become plugged by snow or other material.
Class A Chimney Conversion Kit

Simpson Duravent provides a conversion kit for those wishing to use an existing wood stove chimney to vent this direct vent stove. The illustration below gives an overview of this type of installation. See the instructions included with the kit for details.

! Do not exceed the maximum vertical rise. The restrictor position should be set to the position that most closely resembles the vent configuration (see "Approved Vent Configurations" for details).

NOTE: because this installation utilizes non-standard vent, the restrictor position may vary. Carefully monitor the burn characteristics to verify correct restrictor position.

! The conversion kit does not work on interior masonry chimneys.

Chimney Conversion Kit A (# 931)
- Metalbestos 6” I.D.
- Security Chimneys 6” I.D.
- Jackes-Evans 6” I.D.
- Hart & Cooley 6” I.D.
- Pro-Jet 6” I.D.

Chimney Conversion Kit B (# 932)
- Simpson Dura-Vent 6” I.D.
- Air-Jet 6” I.D.
- Metal-Fab 6” and 7” I.D.
- Amer. Metals 6” & 7” I.D.
- Metalbestos 7” and 8” I.D.
- Jackes-Evans 7” and 8” I.D.
- Hart & Cooley 7” and 8” I.D.
- Pro-Jet 7” and 8” I.D.
- Security Chimneys 8” I.D.

Chimney Conversion Kit C (# 933)
- Simpson Dura-Vent 7” and 8” I.D.
- American Metals 8” I.D.
- Air-Jet 8” I.D.
- Metal-Fab 8” I.D.
- American Metals 8” I.D.

Each Kit Contains:
- Retro Connector
- Retro Vertical Top

Additional Required Equipment:
- 4” Flex (#711 or U.L. 1777)
- Termination (#991)
- Co-Axial Sections
**Masonry Chimney Conversions (Interior or Standard)**

- Follow the requirements and use the equipment listed in the illustration below to install this appliance into an interior masonry chimney.
- Maximum vertical rise is 40’
- Minimum vertical rise is 10’
- The restrictor position should be set to the position that most closely resembles the vent configuration (see "Approved Vent Configurations" for details). NOTE: because this installation utilizes non-standard vent, the restrictor position may vary. Carefully monitor the burn characteristics to verify correct restrictor position.

**NOTE:** Certain jurisdictions may not allow this type of installation or may require two co-linear vents be used for venting through an existing masonry chimney. Check with your local building official before installing.

### Freestanding Masonry Chimney

The entire chimney system must be air-tight. Make sure to seal the flashing, clean-out, and thimble connection, and to inspect the chimney.

- Make sure the coaxial pipe maintains a 1” clearance to any combustible. The vent must be sealed air-tight.
- Connector with Cover (included in #934 Masonry Conversion Kit)
- 4” Dia. Flex Line (UL 1777 Gas Liner)
- High-Temp. Silicone
- #990 90° Elbow
- Co-Axial Straight Lengths
- #991 High Wind Termination
- Flashing (included in #934 Masonry Conversion Kit)

### Standard Masonry Fireplace

The entire chimney system must be air-tight. Seal the connector cover and inspect the chimney.

- Make sure the coaxial pipe maintains a 1” clearance to any combustible. The vent must be sealed air-tight.
- Connector (included in #934 Masonry Conversion Kit) secured and sealed to block-off plate.
- 4” Dia. Flex Line (UL 1777 Gas Liner)
- High-Temp. Silicone
- #991 High Wind Termination
- Flashing (included in #934 Masonry Conversion Kit)
Finalizing the Installation

Make sure the gas control valve is “OFF” and the heater is cool prior to conducting service.

1. Remove the face and glass (see page 24).

   ! We recommend you purge the gas line at this time (with the glass removed). This allows gas to be detected once it enters the firebox, ensuring gas does not build up.

2. Install the log set and coals (see page 26).

3. Turn on gas to the heater. Leak test all gas joints prior to starting the appliance. Start the pilot. Start the main burner. Leak test all gas joints again.

4. Inspect the pilot flame (see the illustration below). Adjust the pilot flame if necessary.

   **Pilot Flame Adjustment**

   The pilot flame must contact the thermocouple and thermopile (see the illustration below). Adjust the pilot up or down as necessary.

To adjust the pilot flame, turn this screw (NOTE: if totally unscrewed gas will come out of this port). Clockwise lowers the flame while counter-clockwise raises it.

5. Replace and secure the glass and face (see page 24).
Let the heater burn for thirty minutes. Adjust the air shutter, if necessary, to achieve the correct looking flame (see the illustration below).

- The air shutter adjusts the amount of air that mixes with the gas before it exits the burner holes. It is used to fine-tune the flame for differences in altitude and vent configuration.

**Air Shutter Adjustment**

**ADJUSTING THE AIR SHUTTER**

Pushing to the left gives the flame less air (making it more orange). Pushing to the right gives the flame more air, making it more blue. For fine adjustments use a screwdriver to tap the air shutter.

**NOTE:** If the air shutter is all the way open, yet the flames remain sooty, shut off gas to the fireplace and contact a qualified gas service technician.

**Correct**

Flames should be blue at the base, yellow-orange on the top.

**Not Enough Air**

If the flames are over 14" tall or sooty on the ends, open the air shutter.

**Too Much Air**

If the flames are all blue and short, close the air shutter.

**NOTE:** The logs must be installed correctly to monitor the flame while adjusting the air shutter.

If the vent configuration is installed incorrectly the vent may cause the flames inside the heater to lift or "ghost" – a dangerous situation. Inspect the flames after installation to insure proper performance. If the vent configuration is correct, yet the flames are lifting or ghosting, shut off gas to the heater and contact the dealer for information on remedying the problem.

Failure to properly adjust the air shutter may lead to improper combustion and a safety hazard. Consult your dealer or installer if you suspect an improperly adjusted air shutter.

**Burner Pan**

The flames should burn right off the top of the burner ports (if they are too blue, adjust the air control).

**Burner Ports (holes)**

If the flames are lifting, yet the vent configuration is correct, contact your dealer.

If the flames are ghosting, yet the vent configuration is correct, contact your dealer.

Turn the flame adjust knob to its highest position - the flames should be a maximum 9" to 10" tall. Check the flame on low position. The flames should burn off of each burner hole. If the heater does not work correctly, contact your dealer for a remedy.

Give this manual to the home owner and fully explain the operation of this heater.
Glass Removal

! Make sure the gas control valve is “OFF” and the heater is cool prior to conducting service.

a) Lift the stove top off the stove and place it aside.

b) Open the doors, lift them off the hinges, and place them aside. Remove the stove front by lifting it up then forward. Place it aside.

c) Open the two latches holding the glass frame in place - follow the directions shown below.

NOTE:
The metal tabs on the stove front slide over the tabs on the side castings.

d) Lift the glass frame slightly, swing the top forward, then lift the glass frame to disengage it from the bottom guides.

Re-Attaching the Glass Frame:

a) Slide the two brackets on the bottom of the glass frame into the glass frame guides (hold the glass frame at a slight angle.

b) Swing the glass frame into place - you may have to lift it slightly to allow it to fit over the top of the firebox.

c) Attach the upper latches (follow the instructions above in reverse).

d) Replace the stove front and top.
Glass Frame Removal and Installation (continued)

The latch can come loose from the latch assembly. This occurs only when it is rotated. Follow the directions below to re-install the latch if it comes loose.

Hold the latch at an angle and insert it into the slot on the glass frame anchor.

NOTE: this slot may be at a different angle than illustrated.

Note how the washer on the latch fits behind the flange on the glass frame anchor.

Once fully inserted, turn the latch until it is upright.
Log Installation

! Make sure the gas control valve is “OFF” and the heater is cool prior to conducting service.

! Failure to position the parts in accordance with these diagrams or failure to use only parts specifically approved with this appliance may result in property damage or personal injury.

NOTE: The burner must be correctly positioned. Grasp the burner, lift it up, position the gas inlet tube over the burner tube, and slide the burner all the way down (see page 38 for details).

These steel platforms with pins are for the rear log.

The pins are used to locate the logs on the burner.

These flat spots are for the front twigs.

Place the rear log in place as shown here.

Place the front logs in place. Note how the holes in the bottom of the front logs fit over the pins on the burner.
Log Installation (continued)

Place the top twigs in place. Note how the holes in the bottom of the twigs fit over the pins on the logs.

Place the front twigs in place. They fit on the flat portions of the burner.

Installing the Rock Wool

The rock wool comes in one clump. Tear off “dime” sized clumps and flatten. Then pull on the wool to create gauze-like pieces. Place them near some of the burner holes. The wool glows best when very thin and porous.

**NOTE:** We recommend using very little rock wool, especially in LP or high-altitude installations.
**Before You Begin**

**Warning:** Read this entire manual before you use your new stove (especially the section "Safety Precautions" on pages 4 & 5). Failure to follow the instructions may result in property damage, bodily injury, or even death.

**Warning:** Do not operate appliance with the glass front removed, cracked or broken. Replacement of the glass should be done by a licensed or qualified service person.

**Location of Controls - See explanation below**

- **On/Off Switch**
  This control is used to turn the flame on and off.

- **Optional Blower Control**
  This knob controls the speed of the internal convection blower that pushes heated air into the room.

- **Gas Control Knob**
  This knob controls gas to the stove and pilot. There are three positions: ON, OFF, and PILOT. The indicator line is to the left of the knob.

- **Flame Adjust Knob**
  This knob controls the flame height from low ("LO") to high ("HI"). The indicator line is above the knob.

- **Pilot Igniter**
  The pilot igniter is used only to start the pilot. When pressed, it sends an electrical charge to the pilot assembly. This creates a blue spark directly next to the pilot, igniting the pilot flame.

- If using a remote control or thermostat, the On/Off Switch must be left "OFF". Turning the On/Off Switch "ON" will keep the stove on always.
Starting The Pilot Flame

The pilot flame is required to ignite the main burners (it also plays a safety role). It should be left on once lit. It will stay lit unless the gas control valve is turned to “OFF”. However, the pilot will go out if the gas is shut off, the propane tank runs out (or low) or if the stove malfunctions. If the pilot turns off frequently, call your dealer for information. To start the pilot follow the directions below:

WARNING:
When lighting or re-lighting the pilot, the glass must be removed (see page 24).

a Remove the glass (see page 24 for details).

b Push the gas control knob in slightly and turn it to the “OFF” position. The knob will not turn from “ON” to “OFF” unless the knob is depressed slightly. Wait five minutes to let any gas that may have accumulated inside the firebox escape. If you smell leaking gas, follow the directions on the cover “IF YOU SMELL GAS”.

c Turn the gas control knob to the “PILOT” position and press the knob in, this will allow gas to flow to the pilot light. Press the button on the pilot igniter repeatedly until you see the pilot light.

WARNING:
If the pilot does not light after 15 seconds, release the knob and call your dealer for service. Do not attempt to light pilot until service has been performed.

NOTE:
You may wish to remove the log set to gain a better view of the pilot (see page 26).

d Keep the gas control knob depressed for 30 seconds once it is lit.

e Release the gas control knob. If the pilot goes out, repeat step C. If the pilot refuses to stay lit, call your dealer for service. With the pilot lit, proceed to step “f”.

NOTE:
If the gas control knob is turned to “OFF” after the pilot has been lit for several seconds, the knob will not turn. This safety feature prevents gas from entering the firebox.

f Replace the glass.

g Turn the gas control knob counter-clockwise to “ON”. The pilot is now lit and the heater can be turned on and off.
Starting the Stove for the First Time

Fumes from the Painted Surfaces Curing
Burn the heater at a medium setting for approximately one hour the first time. This will cure the painted surfaces. Fumes from the paint curing and oil burning off the steel may occur. This is normal. We recommend you open the window to vent the room.

Condensation
Water may appear on the glass each time you start the heater - this is normal.

Blue Flames
The flames will be blue when first started. After fifteen minutes the flames will turn a more realistic yellow and orange color.

Turning the Stove On and Off

After the pilot has been started...

Warning: Do not place combustible items on top or directly in front of the heater, even temporarily. The optional thermostat may start the heater causing a combustible item to ignite.

Note: If the heater turns on and off frequently while using the thermostat, you may want to adjust the flame height down until it produces just enough heat needed.

Adjusting the Flame Height

Your stove has an adjustable flame to tailor the look and heat output to your specific needs. It is adjusted by turning the middle dial on the gas control valve.

Flame Height Adjustment Knob
Index Mark

Turn counter-clockwise to adjust the flame higher, clockwise to lower.
Adjusting the Blower Speed (optional)

The blower helps transfer heat from the heater into the room. It will not turn on until the heater is up to temperature (approximately 10 minutes after starting). See the illustration below for instructions on adjusting the blower speed.

**OFF**
Turn the dial all the way counterclockwise until it clicks off.

**HIGH**
The high position is all the way counterclockwise, **without** clicking off.

**LOW**
Turn the dial all the way clockwise.

---

Normal Operating Sounds

- **Pilot Flame**
The pilot flame, which remains on, makes a very slight “whisper” sound.

- **Gas Control Valve**
As the gas control valve is turned on and off you will hear a dull clicking sound. This is the valve opening up and shutting down.

- **Blower**
This heater uses a blower to push heated air into the room. You will hear the sound of air movement that increases as the speed is increased.

- **Extinction Pops**
It is not unusual, especially on Propane (LP) appliances, to experience a “pop” when the burner is shut off.

- **Blower Snap Disk**
This part can produce a clicking sound as it turns the blower on and off.

The appliance may creak with change of temperature -- THIS IS NORMAL.

---

Normal Operating Odors

This appliance has several areas that reach high temperatures. Dust or other particles on these areas may burn and create a burnt-paper smell. This is normal during startup. You may notice the smell is more acute if the appliance was left idle for a long period.
Maintaining Your Stove's Appearance

**WARNING**: Make sure the appliance has fully cooled prior to cleaning.

**Painted Surfaces**
- Painted surfaces should be cleaned with a duster. If scratches occur, lightly sand the area with fine sandpaper. Clean the area and, with the stove cool, apply one or two thin coats of stove paint to the area (mask the area to avoid overspray). Allow the stove to dry, then turn the stove on to cure the paint (1 hour on medium).

**Enamel Surfaces**
- Use only soft cloth and water to clean enamel surfaces. To fix chips in the enamel, follow the directions below:
  1. Let the stove cool. Clean the area thoroughly.
  2. Shake the Travis Enamel Touch-Up thoroughly. Apply to the damaged area.

**Glass**
- Clean the glass with soap and water (do not use abrasives). To remove the glass, follow the instructions on page 24.

**Yearly Service Procedure**

- Failure to inspect and maintain the heater may lead to improper combustion and a potentially dangerous situation. We recommend the following procedures be done by a qualified technician.

1. Check the pilot flame. It should touch approximately 3/8” of the top of the thermopile and touch the top of the thermocouple (see illustration below). If it does not, contact your dealer for service.

2. Shut off gas to the heater by turning the gas control knob to "OFF" (see step A under "Starting the Pilot" on page 29). Let the heater cool for 15 minutes. Remove the glass (see page 24).

3. Remove the log set (NOTE: the logs are very fragile - see page 26). If severely deteriorated, replace. Check the logs for sooting. A small amount of soot along the bottom of the logs is normal. If excessive sooting is found, the heater will require adjustment. Contact your dealer.

4. Clean the burner (especially the burner holes) and inspect the following:
   - Make sure the burner is not warped, cracked, or damaged.
   - Check the firebox and area around the pilot to make sure there is no warping or damage. If any problem is found, discontinue use and contact your dealer for service.

5. Replace the log set. Clean and replace the glass (use non-abrasive cleaner - if damaged, replace). Make sure the gasket along the perimeter of the glass contacts the face of the firebox and forms an air-tight seal. If it does not, re-align or replace the gasket to insure an air-tight seal. Replace the glass.

6. Inspect the area behind the access door. Clean if necessary. Check the gas control valve and the gas lines. If damage is found, discontinue use and contact your dealer for service. Clean the air channels and ducts.

7. Start the pilot and turn on the main burner. The flames should be orange/yellow and not touch the top of the firebox. If the pilot or main burners do not burn correctly, contact your dealer for service. Monitor the blower operation.

8. Remove any debris or vegetation near the vent termination. Contact your dealer if any sooting or deterioration is found near the vent termination.

</table>
How this Stove Works

! This stove was designed with safety as the primary concern. Many of the components inside this stove are for safety purposes. Therefore, only certified gas service technicians should service this stove.

What Turns the Main Burners On and Off

This stove uses a millivolt system to control its operation (a millivolt is a very small amount of electricity). The thermopile and thermocouple generate electricity when heated by the pilot flame. This electricity is used to operate the gas valve. Without enough electricity, the gas valve will not turn on. That is why when starting the pilot the gas control knob has to be pressed in long enough for the thermocouple to heat up and generate enough electricity. The thermopile provides power for the ON/OFF switch, remote control, or thermostat (see the illustration below). Because the thermopile generates the electricity needed to turn the stove on and off, this stove can be operated when the power is out (although the blower will not run).

What Prevents Gas Buildup

+ This appliance utilizes a high-technology gas valve in conjunction with a pilot flame to ensure no gas builds up inside the firebox.

+ The thermocouple (next to the pilot) senses when the pilot flame is lit. If the pilot flame goes out, this thermocouple no longer generates electricity, causing the gas valve to automatically shut off all gas to the heater, preventing the pilot from spilling gas into the firebox.

Pilot Flame
The pilot flame is a time-proven component that eliminates the possibility of gas buildup inside the firebox.

Gas Valve
This high-technology valve automatically shuts off all gas if it does not receive a signal from the thermocouple. If any component is damaged or sensing a malfunction, or if the wiring is damaged, it will shut off all gas.

Thermocouple
The thermocouple generates a small amount of electricity. If the pilot flame goes out, the gas valve automatically shuts off all gas.

Ceramic Glass
The glass in your heater is the most durable glass available. It has been tested to be extremely resistant to breakage from temperature changes.

External Shut Off Valve
This valve is placed on the gas line to shut off gas to the appliance during maintenance procedures.
A copy of the instruction label (on a tag near the gas control valve) is shown below.
Limited 7 Year Warranty

To register your TRAVIS INDUSTRIES, INC., 7 Year Warranty, complete the enclosed warranty card and mail it within ten (10) days of the appliance purchase date to TRAVIS INDUSTRIES, INC., 4800 Harbour Pointe Blvd. SW, Mukilteo, WA 98275. TRAVIS INDUSTRIES, INC., warrants this gas appliance (appliance is defined as the equipment manufactured by Travis Industries, Inc.) to be defect-free in material and workmanship to the original purchaser from the date of purchase as follows:

**Check with your dealer in advance for any costs to you when arranging a warranty call. Mileage or service charges are not covered by this warranty. This charge can vary from store to store.**

**Years 1 & 2 - COVERAGE: PARTS & LABOR**

**Burner Assembly:**
- Burner Pan, Misting Tube, Air Shutter Assembly, Main Burner Orifice

**Firebox Assembly:**
- Adjustable Air Restrictor, Pressure Relief Mechanisms (direct vents only), Glass Attachment Mechanism

**Gas Control Assembly:**
- Adjustable control valve, millivolt wiring and connectors (located within the metal heater structure), thermopile, thermocouple, pilot hood, orifices, pilot gas line, piezo ignitor

**Ceramic Glass**
- Glass (breakage from thermal shock)

**Ceramic Logs**
- Log Set, Coals, Ember Strip (Steel Fiber)

**Gold Plating**
- Gold or Nickel Door, Optional Grill (see “Conditions and Exclusions” # 9)

**Electrical Assembly**
- Blower, wiring harness, snap discs, rheostat speed control

**Conditions & Exclusions**

- Paint, Gasketing

**Years 3 THROUGH 5 - COVERAGE: PARTS & LABOR**

**Firebox Assembly:**
- Adjustable Air Restrictor, Pressure Relief Mechanisms (direct vents only), Glass Attachment Mechanism

**Convection Heat Exchanger**
- One-Way Freight Allowance
- One-way freight allowance on pre-authorized repair done at factory is covered.

**Exclusions:**
- Paint, Gasketing, Burner Assembly, Electrical Assembly, Gas Control Assembly, Ceramic Glass, Ceramic Logs, Gold & Nickel Plating, Accessories, Re-Installation Allowance

**Years 6 & 7 - COVERAGE: PARTS ONLY**

**Firebox Assembly:**
- Adjustable Air Restrictor, Pressure Relief Mechanisms (direct vents only), Glass Attachment Mechanism

**Exclusions:**
- Paint, Gasketing, Burner Assembly, Electrical Assembly, Gas Control Assembly, Ceramic Glass, Ceramic Logs, Gold & Nickel Plating, Accessories, Convection Heat Exchanger, Re-Installation Allowance, One-Way Freight Allowance, Labor

**CONDITIONS & EXCLUSIONS**

1. This new gas appliance must be installed by a qualified gas appliance technician. It must be installed, operated, and maintained at all times in accordance with the instructions in the Owner’s Manual. Any alteration, willful abuse, accident, neglect, or misuse of the product shall nullify this warranty.

2. This warranty is non-transferable, and is made to the ORIGINAL purchaser, provided that the purchase was made through an authorized TRAVIS dealer.

3. Discoloration and some minor expansion, contraction, or movement of certain parts and resulting noise, is normal and not a defect and, therefore, not covered under warranty. The installer must ensure the appliance is burning as per the rating tag at the time of installation. Over-firing (operation above the listed BTU rate) of this appliance can cause serious damage and will nullify this warranty.

4. The warranty, as outlined within this document, does not apply to the chimney components or other Non-Travis accessories used in conjunction with the installation of this product. If in doubt as to the extent of this warranty, contact your authorized TRAVIS dealer before installation.

5. Travis Industries will not be responsible for inadequate performance caused by environmental conditions such as nearby trees, buildings, roof tops, wind, hills or mountains or negative pressure or other influences from mechanical systems such as furnaces, fans, clothes dryers, etc.

6. This Warranty is void if:
   a. The unit has been operated in atmospheres contaminated by chlorine, fluorine or other damaging chemicals.
   b. The unit is subject to submersion in water or prolonged periods of dampness or condensation.
   c. Any damage to the unit, combustion chamber, heat exchanger or other components due to water, or weather damage which is the result of, but not limited to, improper chimneyventing installation.

7. Exclusions to this 7 Year Warranty include: injury, loss of use, damage, failure to function due to accident, negligence, misuse, improper installation, alteration or adjustment of the manufacturer’s settings of components, lack of proper and regular maintenance, damage incurred while the appliance is in transit, alteration, or act of God.

8. This 7 Year warranty excludes damage caused by normal wear and tear, such as paint discoloration or chipping, worn or torn gasketing, corroded or cracked logs, embers, etc. Also excluded is damage to the unit caused by abuse, improper installation, modification of the unit, dripping of the orifices, or the use of fuel other than that for which the unit is configured. Units are shipped for natural gas and must be converted to propane using the included conversion kit. Confirm fuel configuration with your installer.

9. Damage to gold, nickel, or brass surfaces caused by fingerprints, scratches, melted items, or other external sources left on the surface is not covered in this warranty. Damage from the use of abrasive cleaners on brass is not covered in this warranty.

10. TRAVIS INDUSTRIES, INC., is free of liability for any damages caused by the appliance, as well as inconvenience expenses and materials. Incidental or consequential damages are not covered by this warranty. In some states, the exclusion of incidental or consequential damage may not apply.

11. This warranty does not cover any loss or damage incurred by the use or removal of any component or apparatus to or from the gas appliance without the express written permission of TRAVIS INDUSTRIES, INC., and bearing a TRAVIS INDUSTRIES, INC. label of approval.

12. Any statement or representation of TRAVIS products and their performance contained in TRAVIS advertising, packaging literature, or printed material is not part of this 7 year warranty.

13. This warranty is automatically voided if the appliance’s serial number has been removed or altered in any way. If the appliance is used for commercial purposes, it is excluded from this warranty.

14. No dealer, distributor, or similar person has the authority to represent or warrant TRAVIS products beyond the terms contained within this warranty. TRAVIS INDUSTRIES, INC., assumes no liability for such warranties or representations.

15. The stated Mills will not cover the cost of the removal or re-installation of hearths, firebacks, mantels, venting or other components.

16. If for any reason any section of this warranty is declared invalid, the balance of the warranty remains in effect and all other clauses shall remain in effect.

17. THIS 7 YEAR WARRANTY IS THE ONLY WARRANTY SUPPLIED BY TRAVIS INDUSTRIES, INC., THE MANUFACTURER OF THE APPLIANCE. ALL OTHER WARRANTIES, WHETHER EXPRESS OR IMPLIED, ARE HEREBY EXPRESSLY DISCLAIMED AND PURCHASER’S RECOUERSE IS EXPRESSLY LIMITED TO THE WARRANTIES SET FORTH HEREIN.

**IF WARRANTY SERVICE IS NEEDED:**

1. If you discover a problem that you believe is covered by this warranty, you MUST REPORT it to your TRAVIS dealer WITHIN 30 DAYS, giving them proof of purchase, the purchase date, and the model name and serial number.

2. Travis Industries has the option of either repairing or replacing the defective component.

3. If your dealer is unable to repair your appliance’s defect, he may process a warranty claim through TRAVIS INDUSTRIES, INC., including the name of the dealer where you purchased the appliance, a copy of your receipt showing the date of the appliance’s purchase, and the serial number on your appliance. At that time, you may be asked to ship your appliance, freight charges prepaid, to TRAVIS INDUSTRIES, INC., at its option, will repair or replace, free of charge, your TRAVIS appliance if it is found to be defective in material or workmanship within the time frame stated within this 7 year warranty. TRAVIS INDUSTRIES, INC., will return your appliance, freight charges (years 1 to 5) prepaid by TRAVIS INDUSTRIES, INC., to your regional distributor, or dealership.

4. Check with your dealer in advance for any costs to you when arranging a warranty call. Mileage or service charges are not covered by this warranty. This charge can vary from store to store.

Travis Industries 100-01169_001 4050119
LP Conversion Instructions

Install the conversion kit prior to installing the gas line to ensure proper gas use.

1. Remove the face and glass (see page 24). Remove the logs and coals (if installed - page 26)
2. Remove the burner (see illustration below).

- Reach into the firebox and lift the burner upwards.
- Do not lift burner out by the pins.
- Pull the burner forward, out of the firebox.
- This tube on the burner inserts into this tube on the mixing tube.
- When installing, make sure the burner is fully seated - it rests on these supports. Replace the ember trays last.

Remove the ember trays from both sides of the burner.
3 Follow the directions below to replace the orifice.

Remove the four screws holding the mixing tube in place.

Remove the mixing tube from the air shutter by sliding it to the left.

Slide the air shutter to the fully open position.

Use a 1/2" open end wrench to unscrew the burner orifice.

NOTE: Screw the LP orifice in so the orifice shoulder protrudes 5/16" (indicating full insertion).

The new LP orifice has "0.062" stamped on it.

Apply thread sealant to the new orifice and install.

The old NG orifice has "37" stamped on it.

5/16" Hex

NOTE: when re-attaching, this pin lines up with the notch in the pilot hood.

4 Remove the pilot orifice following the instructions below. Replace with the propane pilot orifice

Lift the pilot hood off the pilot assembly.

Use a hex wrench to unscrew the orifice.

Remove the orifice and replace with the LP orifice. Screw the orifice all the way in and replace the pilot hood.
5 Install the logs and embers.

6 Replace glass and face.

7 Remove the regulator from the front of the gas control valve. Replace with the propane regulator, using the new gasket and screws included with the regulator. **NOTE:** Leak test this area after the heater is installed, gas is connected, and the main burner is lit.

8 Make the gas line connection, bleed the gas line (if applicable), start the heater and thoroughly leak-test all gas connections and the gas control valve. Check the pilot. Adjust if necessary.

**WARNING:** When lighting or re-lighting the pilot, the glass must be removed (see page 24).

To adjust the pilot flame, turn this screw (NOTE: if totally unscrewed gas will come out of this port). Clockwise lowers the flame while counter-clockwise raises it.

The pilot flame must contact the thermocouple and thermopile (see the illustration below). Adjust the pilot up or down as necessary.
**Blower (SKU 99000153)**

**WARNING:** Turn the gas control valve to off and make sure the appliance has fully cooled prior to conducting service.

1. Attach the two black wires at the rear right of the stove to the thermodisk (orientation does not matter). Then attach the thermodisk to the bottom of the stove body following the directions below.

2. Place the blower near the rear of the stove. Attach the wiring in grommets following the directions below.

---

**WARNING:** DO NOT PLUG THE STOVE IN UNTIL INSTALLATION IS COMPLETE.

---

**Back of Stove**

- **a** Remove the snap disk cover plate below the burner on the **left** side (when facing the stove from the front).
- **b** Attach the snap disk using the screws removed in step "a".
- **c** Attach the wires labeled snap disk to the snap disk.
- **d** Attach the molex connector.
- **e** Route the wires labeled "Valve on/off" and "Solenoid" under the burner pan to a location near the gas control valve. Attach the two wires leading from the control box to the two block wires labeled "Rheostat".
- **f** Slide the rubber grommets (with spacers inserted inside) onto the fan mounting bracket.

---

**Back of Stove**

- **Remove one of the screws holding the mounting bracket in place. Insert the screw through the eyelet on the green ground wire and replace.**
- **1/4" Nutdriver**
- **Attach the black and white wires labeled “Blower” to the blower (orientation does not matter).**

---

**Optional Equipment (for qualified installers only) 41**

**Travis Industries 100-01169_001 4050119**
3 Slide the left side of the blower mounting bracket over the grommets on the left mounting bracket attached to the stove (see the illustration below). Then insert the stud plate through the right side grommets and through the right mounting bracket on the stove. Secure the stud plate with the included washers and nuts.

4 Make sure all of the wiring is placed away from the blower impeller and the bottom of the burner. Use lock ties, if necessary, to ensure no wires are damaged.

5 Open the control cover following the directions below. Remove the button plug and install the rheostat.

6 Plug the blower in. Let the heater achieve operating temperature and test blower operation.
**Accent Light (Type 2 – 94400111)**

Make sure power to the heater has been turned off prior to installation (unplug the power cord).

Do not connect 110-120 VAC to the gas control valve or the on/off circuit on this fireplace.

**IMPORTANT INSTALLATION NOTE FOR MODELS USING THE FIREBACKS:**

Follow the steps below if installing the firebacks with an accent light.

- Remove the burner (see the manual for details).
- Install the rear fireback (see the instructions included with the firebacks).
- Install the accent light.
- Replace the burner.
- Install the side firebacks (see the directions included with the firebacks).

**NOTE:** The bulb may be shipped separately. Do not touch the bulb – oil or other residue left on the bulb may lead to premature bulb failure. Use a cloth or paper towel to handle the bulb.

1. Modify the accent light assembly as shown in the illustration below.

2. Remove the burner from the stove (see owner’s manual for details). Install the accent light assembly as shown in the illustration below.

**NOTE:** To prevent heat-damage to the wires, make sure this wires are routed along the floor of the firebox, away from the burner.

**NOTE:** The accent light requires the right side access hole. If this hole is being used for the thermodisk for optional blower, switch the thermodisk to the mounting position on the left side.
3. Attach the rheostat assembly following the directions below.

- **a** Disconnect the molex connector leading to the power cord.
- **b** Attach the two molex connectors on the rheostat wiring harness to the power cord and the molex connector on the appliance.
- **c** Attach the quick-connect from the accent light to the quick-connect on the rheostat wiring harness.
- **d** Use the included wire nut to connect the wire leading from the rheostat to the remaining wire leading from the accent light.
- **e** Slide the rheostat assembly into place and secure with the included nuts.

⚠️ **Make sure all wiring does not contact the firebox or blower (use wireties if necessary).**

4. Restore the firebox to the correct configuration (replace the burners, etc.).
**Accent Light Operation**

**OFF**
Turn the dial all the way counter-clockwise until it clicks off.

**LOW**
Turn the dial 180° clockwise until the light begins to glow.

**HIGH**
The high position is all the way clockwise.

**NOTE:** The accent light responds best when turned to high, then turned down to the desired light level.

**Bulb Replacement**

**NOTE:** Do not touch the bulb – oil or other residue left on the bulb may lead to premature bulb failure. Use a cloth or paper towel to handle the bulb.

The accent light must be replaced with 35 Watt 120 Volt T4 Halogen Bulbs (G6.35 Base) – available at most hardware stores. To replace the bulb, simply remove it from the socket and insert the new bulb (pin orientation does not matter).
